

# The informal waste collection system in Vietnam guarantees high recovery rates— cans are often locally recycled, the aluminum is recycled into other materials than cans

	Fully implemented	Partially implemented	Not implemented
Source separation	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Source separation mostly non-existent – however the large pool of informal sector collect cans separately through an informal process			
Extended producer responsibility	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Specific plans to introduce EPR as of 2024 are in place			
Deposit return scheme	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
No DRS is in place			

1) Separate coll. includes recovered after MRF & transfer station, and all UBCs picked by informal sector

## STRONG AREAS

- High collection rates due to high value of aluminium to the informal waste sector
- Vietnam is well-advanced into concretely establishing extended producer responsibility

## MAIN IMPROVEMENT AREAS

- Source separation is mostly missing
- Working conditions of informal sector to be improved
- Local recycling infrastructure operates obsolete technologies resulting in significant environmental impact
